

Italmatch is

Italmatch takes part in LIFE, the European Community program dedicated to sustainable development.

On 16 July 2015 Italmatch Chemicals received final approval for the implementation of the LIFE Environment project, submitted by the company within the framework of LIFE, the funding program organised by the European Union for the development of policies and actions that help safeguard the environment.

Included within the LIFE 2014-2020 program and entirely devised by Italmatch, Italmatch "LIFE/ENV/IT/000346" has set an ambitious goal: to design and implement a highly innovative, sustainable chemical production process.

The success of the project, strongly supported by top management and coordinated by a dedicated team, will help strengthen the leadership role of Italmatch as a benchmark for sustainable chemicals at international level.

The project kick-off meeting held on 17 and 18 September in Arese was attended by the coordinating team and the partners SP Technical Research Institute of Sweden and Sviluppo Chimica from Italy, specialised in implementing sustainability projects for the chemical sector.

This valuable alliance marks a further important step at the service of excellence in chemistry.

“

We have always been committed to R&D and Innovation, with a view to paying a key role in new, rapidly expanding markets in the Specialty Chemicals sector. Our project is an example of perfect synergy that brings together the project team and the Research & Development, Process Technology and Environmental Marketing departments, with the aim of creating value for our market by applying smart new eco-sustainable solutions. ”
